Anti-Spam & Anti-Virus Filter

Complete Email Security

CleanMail is a complete email security package: it protects your business from spam and all kinds of email-borne malware like viruses and phishing mails. It combines the most effective and advanced technologies in one powerful and easy-to-use solution that detects unwanted messages with very high accuracy.

Anti-Spam:
CleanMail integrates the award-winning Spam-Assassin® Anti Spam engine to remove spam mails. Its built-in spam trap automatically keeps the spam filter up-to-date by training a Bayes database with incoming spam mails.

Anti-Virus:
CleanMail supports all popular virus checkers to protect you against virus attacks. The CleanMail installer optionally launches a fully integrated installation of ClamWin Anti-Virus.

Attachment Filter:
The built-in attachment filter of CleanMail allows you to configure a list of attachment types that you want to remove.

CleanMail's transparent proxy architecture was designed to make the integration into existing email processing environments simple and straight-forward. It interfaces easily with any SMTP or POP3 mail server software, such as Microsoft® Exchange, Lotus® Notes/Domino, IMail, or with popular mail clients such as Mozilla® Thunderbird™ or Microsoft® Outlook.

CleanMail offers a selection of built-in, optimized mail filters, capable of detecting unwanted mails with only little resource usage. CleanMail's filter scheduler will optimize filter execution to allow some filters to run at the same time, while others are executed sequentially.

CleanMail's traffic limiting protects your mail server from directory harvest attacks, mail flooding, and virus and spam backscatter messages. Legitimate senders are notified immediately on SMTP protocol level, if their emails are blocked for policy reasons.

CleanMail's mail storage can be used to keep a copy of incoming messages in MIME-Format (RFC-822) on your server. The applications are manifold: you can use this feature to quarantine dubious messages, or to meet legal or regulatory obligations. The message files are available for forwarding, and can also be viewed with all mail client software.

CleanMail's reporting, statistics and logging facilities provide the system administrator with up-to-date status information about mail traffic, including real-time charts, server logs, and statistical data. You can also monitor local and remote CleanMail installations by accessing the web dashboard of the CleanMail Service running on your server.

CleanMail is usually installed within minutes. CleanMail Server allows you to configure an unlimited number of SMTP/POP3 proxy ports or POP3 connectors (full multi-domain support). CleanMail can be installed on your existing mail server and does not require additional hardware.

100% SATISFACTION RISK FREE GUARANTEED

100% risk free
With our 30 days unconditional money-back guarantee, ordering CleanMail is completely risk-free. If you are not satisfied for any reason whatsoever, just let us know within 30 days of purchase, and we will refund your order in full - no questions asked.

CleanMail Anti-Spam & Anti-Virus Filter

CleanMail Saves Your Money!

CleanMail eliminates 99% of all spam related costs and saves a huge amount day by day. Calculate your individual savings based on the following example:

15 Employees (250 days x $400.00 per day), 5 seconds per spam mail wasted	
20 spam mails per day/employee	$ 5208.33
Recurring maintenance cost of CleanMail	$ 94.75
Savings per year	**$ 5113.58**

What Our Users Say

"CleanMail is truly a wonderful product. Easy to use and has saved us time and money well beyond the cost of this product. This was one of the best purchases we made in the last year!"

David Kass

"Let me congratulate you on an effortless configuration job! It took me more time to find out how to configure Eudora WorldMail to listen on port 26 then to install your product. Good job!"

Tim O'Connor, www.Instantiations.com

"I have used the trial and have been duly impressed with its' ability to do the job I required without requiring extensive management. It is also one of the most cost-effective for its' capabilities, and ease of install."

Eric Petty, Aptus Financial

"CleanMail makes it easy to use proven and effective SpamAssassin® Anti Spam filtering with any mail server on Windows."
H. Tschabitscher at about.com

CleanMail Feature Matrix

CleanMail Server protects Exchange, IMail, Notes/Domino or any other mail server against all kinds of junk mail containing spam, viruses and phishing attacks. CleanMail Home can be used with any POP3 email client software to protect a single computer against spam email.
